Get ready for PFD Week 2018! On behalf of the entire program committee, we are pleased to welcome you to the 39th Annual Scientific Meeting in Chicago. This year’s PFD Week revolves around the theme Reflections, and our program focuses on learning from the past to reinvent the future. New this year is a Thieves’ Market session. Please attend to find out what this new platform entails! Make sure to catch Thursday’s surgical round robin as Drs. Cundiff, Gutman, Kenton, and Menefee debate their favorite apical suspension techniques.

This year on Tuesday and Wednesday, the program will include a selection of cutting-edge workshops, and industry-supported learning activities. If you did not sign up ahead of time, swing by the attendee services desk to inquire about openings and register.

Wednesday afternoon we will introduce a new scientific abstract format, the Scientific Salons. These moderated, three-minute oral presentations will give more members an opportunity to present their valuable research and reduce the number of poster presentations.

Make sure to enjoy the Windy City and reflect on all your prior AUGS meetings and experiences. This is a time to catch up with acquaintances and welcome those new to the field. Times are planned for you to relax, exercise with a morning run and yoga class, and enjoy social and networking events, including special interest group meetings, the Welcome Reception, a happy hour in the exhibit hall, and the always-popular AUGSome Karaoke Challenge.

Welcome to Chicago!

KEYNOTE PRESENTATIONS

Raymond A. Lee Lecture: A Primer in Ureteral Injury

Elizabeth Mueller, MD
Professor of Urology and OB/GYN Division and Fellowship Director of FPMRS
Loyola University Chicago Stritch School of Medicine

Dr. Mueller will cover the historical procedures in urology that demonstrate the principles of operating on the ureter. She will cover various treatment options and a modern approach to dealing with ureteral vaginal fistula treatment. Lastly, she will discuss in detail how to manage complications associated with ureteral injury.

Dr. Elizabeth R. Mueller MD, MSME, is a Professor of Urology and Obstetrics/Gynecology at Loyola University Chicago Stritch School of Medicine. She is also Division and Fellowship Director of Female Pelvic Medicine and Reconstructive Surgery Program. She completed a BS in Mechanical Engineering at the University of Missouri-Rolla and a MS in Mechanical Engineering at Washington University in St. Louis. She practiced as an engineer and business manager with Procter and Gamble for six years before attending St. Louis University’s School of Medicine. She completed her urology residency and FPMRS fellowship at Loyola University. She is board-certified in both.

Dr. Mueller is an NIH-funded researcher with an interest in minimally invasive (laparoscopic and vaginal) approaches to pelvic organ prolapse. She is a principle investigator and member of the NIDDK funded consortium on the Prevention of Lower Urinary Symptoms (PLUS) in women. Other areas of research interest include using 3-D ultrasound of the pelvic floor for pelvic floor disorders and management of surgical complications, understanding the urinary microbiome and its relationship to lower urinary tract symptoms. She is a gifted educator and has received numerous awards including Loyola University Stritch School of Medicine’s “Attending of the Year” and the Society of Women in Urology Christina Manthos Mentoring Award given to men or women who have demonstrated extraordinary mentoring skills to female urologists. She is also the mother to incredible 15-year old twins, Jonathan and Mia Rose.

Narrative Matters-The Paradox of Telling Our Stories

Lisa S. Rosenbaum, MD
National Correspondent, New England Journal of Medicine
Cardiologist, Brigham and Women’s Hospital and Instructor, Harvard Medical School

Remember playing the game “telephone” as a child and how the story would change each time it was told? Take this concept and apply it to “stories of medicine”. How can these “stories” help us or lead us astray in our field? Join Dr. Rosenbaum as she introduces the basic concepts of cognitive psychology and explains the role it has in shaping modern medicine and our ability to care for patients, as well as how it can be translated into public policy?

Lisa Rosenbaum is a cardiologist at Brigham and Women’s Hospital, National Correspondent for the New England Journal of Medicine, and Instructor at Harvard Medical School. Her work has also appeared in the newyorker.com, New York Times, and Boston Globe.

Surgical Tutorial – Pubo-vaginal Slings  
Columbus Hall KL  
SPEAKERS: Melissa Kaufman, MD, PhD; Victor W. Nitti, MD  
Over the past decade, the synthetic mid-urethral sling (MUS) overwhelmingly emerged as the primary surgical treatment option for stress urinary incontinence (SUI), arguably relegating the pubovaginal sling (PVS) to second-line therapy. Contemporary application of PVS is typically reserved for concomitant use in reconstructive procedures in the presence of a fistula, diverticula, or urethral reconstruction; or, in the setting of a mesh failure or severe intrinsic sphincter deficiency. However, a plethora of well publicized MUS issues has promoted a resurgence of the PVS as a primary surgical treatment option for SUI in the index patient. This clinical seminar will discuss the indications for PVS, discuss the evidence base for use of PVS, allow the participant to understand the steps and nuances of the surgical procedure, as well as recognize complications of PVS and appropriate management.

Surgical Tutorial – Fistulas
Columbus Hall KL

SPEAKERS: Chi Chiung Grace Chen, MD, MHS; Christina Lewicky-Gaupp, MD

The World Health Organization estimates that obstetric fistula affects 2 to 3.5 million women globally with an annual incidence of 50,000 – 100,000. Although most obstetric fistula occur in lower resources settings, rectovaginal fistula and pelvic fistula from iatrogenic causes such as pelvic surgery can be present in any context. This clinical seminar will cover essential surgical principles in vaginal repair of pelvic fistula and review evidence on the efficacy of repair techniques. Although many of the examples may be from obstetric fistula cases, the surgical principles and techniques shown are also applicable to other types of pelvic fistula.

Panel: Multi-Disciplinary Defecation Disorders
MODERATOR: Gena C. Dunivan, MD
SPEAKERS: Adil Bharucha, MD; Cindy Furey, PT; Tracy L. Hull, MD
Defecation is a coordinated process that involves generation of sufficient propulsive forces in the abdomen and rectum combined with relaxation of the puborectalis and external anal sphincter muscles. Defecation disorders are functional or structural anorectal processes that disrupt this coordinated effort and result in chronic or recurring difficulty in evacuating stool from the rectum. They are common and can affect up to 50 percent of patients with chronic constipation. Symptoms alone are often insufficient to distinguish patients with defecation disorders from those with other types of constipation. The definitive diagnosis is usually made using a combination of a clinical history of chronic constipation and the abnormal diagnostic test results (balloon expulsion, defecography, electromyelography, anal rectal manometry). This multidisciplinary panel will discuss the clinical symptoms of defecatory disorders, the physical examination findings and diagnostic tests employed to make the diagnosis, and the various therapeutic options available to treat the condition.

Multi-Disciplinary Opioid Panel Riverside East

MODERATOR: Kevin Benson, MD, MS, FACOG

SPEAKERS: Sandra Hilton, PT; Danesh Mazloomdoost, MD; Elisa R. Trowbridge, MD;

Every three minutes a woman goes to the emergency room for a prescription painkiller misuse or abuse. The reality is pain management has become synonymous with opioid management. As a result of study misrepresentation, widespread acceptance of opioid safety propelled narcotics to the most highly prescribed medication in the country. The ensuing epidemic has spread nationwide and caused hundreds of thousands of deaths. Opioids blur the line between managing pain and managing chemical dependency. Their efficacy is limited by a hyperalgesia response and use should be limited to acute on chronic pain rather than chronic pain maintenance. Please join us as renowned experts educate us on the Opioid Epidemic and non-addictive strategies to manage pain.
